

ENVIRONMENTAL POLICY

The Environmental Management System, established and implemented by the Company, provides the means for setting, promoting, reviewing and resetting environmental targets and objectives related to the continual improvement of Company's environmental performance and prevention of the negative impacts to the environment. We aim to:

- Putting continuous efforts on environment protection and limiting the adverse consequences of our activities on the environment in line with the principles of sustainable development.
- Full conformity with the applicable national legal and other compliance requirements or obligations that the Company has subscribed to.
- Control of the production processes in order to ensure the effectiveness of environment protection measures.
- Minimize the environmental impacts which refer to climate changes, biodiversity protection, energy efficiency and natural resources preservation throughout our product lifecycle by developing designs, technological characteristics and operations of our facilities.
- Provide continuous training, education and encouragement to the personnel targeting raise of their awareness and responsibility for environment.
- Monitoring the Environmental Management System performances achieving permanent improvement by setting targets on an annual basis.
- Promote and adopt the Company's environmental policy among our contractors, suppliers and associates.
- Promote and encourage the exchange of knowledge and experiences in the field of environment protection between the Company and the local community.
- Participate in determination and adoption of industrial sectorial targets and enhancing national standards in the respective sector.
- Support and participate in research programs towards reaching environmental excellence.
